

Erratum

In the original article "Rheumatoid Arthritis Clinical features and Management strategies at an urban tertiary facility in Pakistan" which appeared on pages 1435-1437 of the December 2014 issue, the following inadvertent errors were made.

On page 1436, in the Results section para 6:

The words 'treatment strategies' were missing and the statement should have read, "In terms of treatment strategies, 173(35%) patients did not require steroids at initial presentation."

On page 1436, in the Results section para 5 should have read:

"Moreover, of those patients who presented with moderate to high disease activity as measured on DAS-28, 65(24%) were men compared with 210(76%) women ($P=0.23$), however the odds ratio showed a trend 1.06 (0.95-1.19)."

On page 1437, in the Conclusion section para 1 should have read:

'seronegative disease' not strain.

The Journal regrets these errors.
